RH Wedding

Create a wedding planner booking website

This project is my practical work assignment at RH wedding planner, where I created a website for ordering wedding planner services so that users can order wedding planner services anytime and anywhere..

My Role

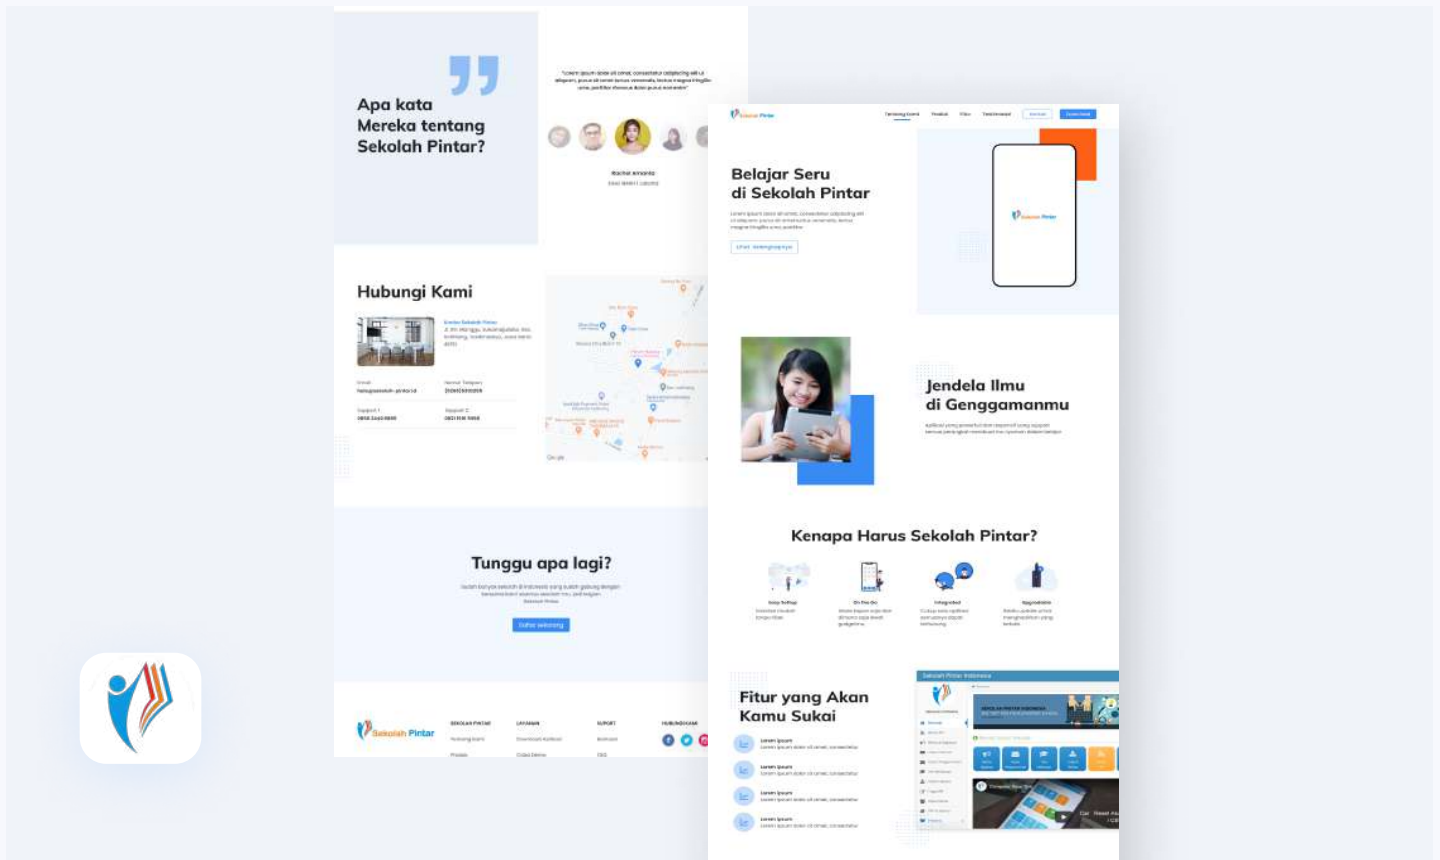

on this project I work with my friend, and I work as a designer and backend engineer

The Problem

I see a lot of brides who don't have much time to prepare for their wedding, because usually they have to find or visit social media vendors one by one. So I thought of making a wedding planner booking website where the bride and groom can find out various information such as packages, prices, and ratings from vendors besides that they can also place orders directly without having to go to the RH wedding planner's office.

Sekolah Pintar

Redesign of Website Company Profile

This project is a redesign of Sekolah Pintar old website company profile. Sekolah Pintar is one of the superior products of PT. Satya Kencana Pasundan which is engaged in Edu-Tech based on Android Applications and Web Base. This app is designed to digitize school management information systems.

My Role

In this project, I work as a full stack web developer

The Problem

the reason sekolah pintar do website redesign is because the old website was their first website when they started, so they didn't prepare design well. Now that they are growing bigger, they need to present their website to potential clients and investors. So they need a better content structure and of course a better and fresher design to attract clients and investors.

Result

With some feedback and revisions, the final design is finally done. Then the next step is the development process by my partner

Before

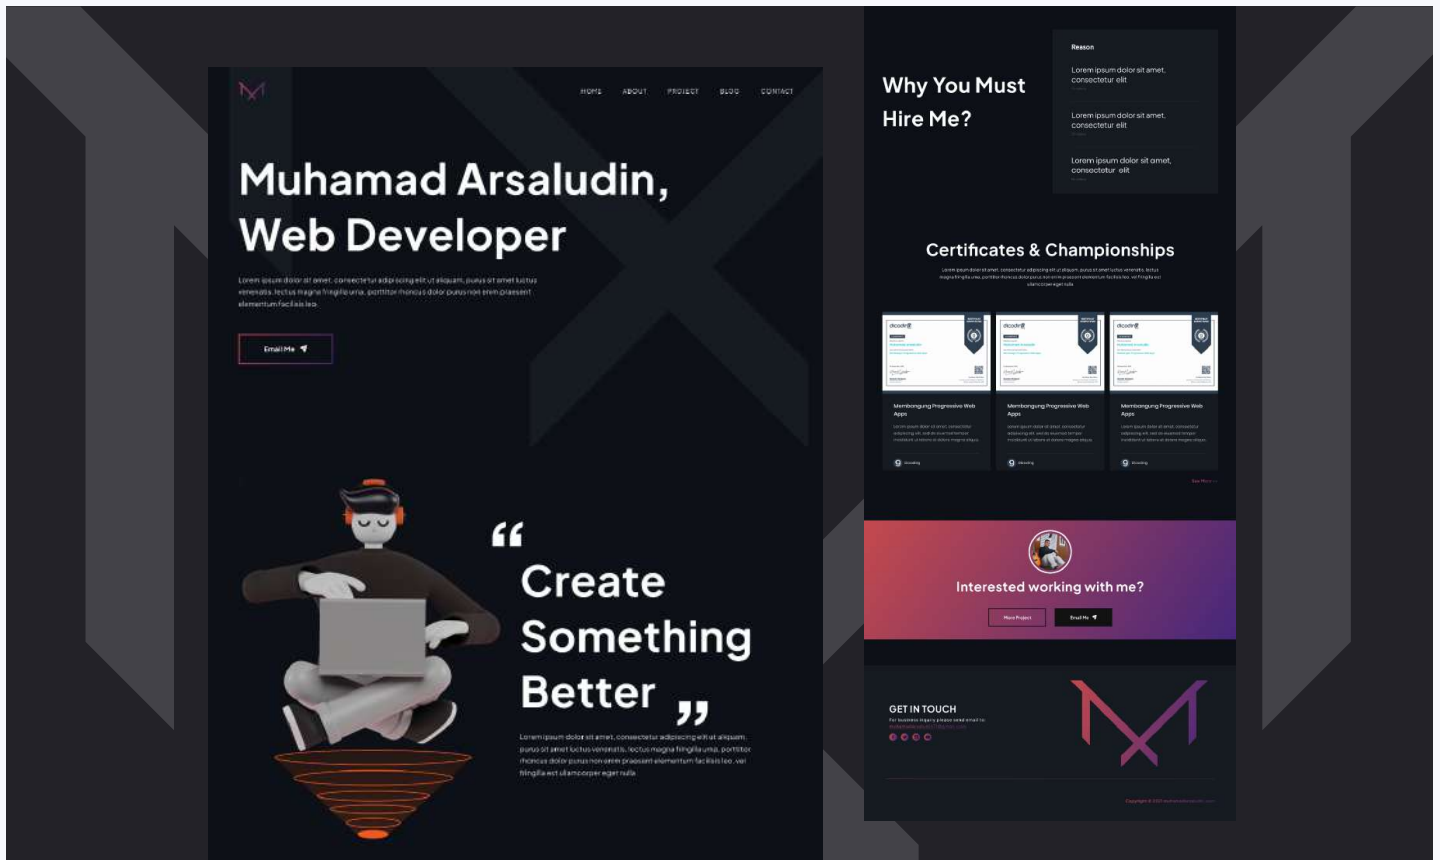

After

My Website

Design my personal website

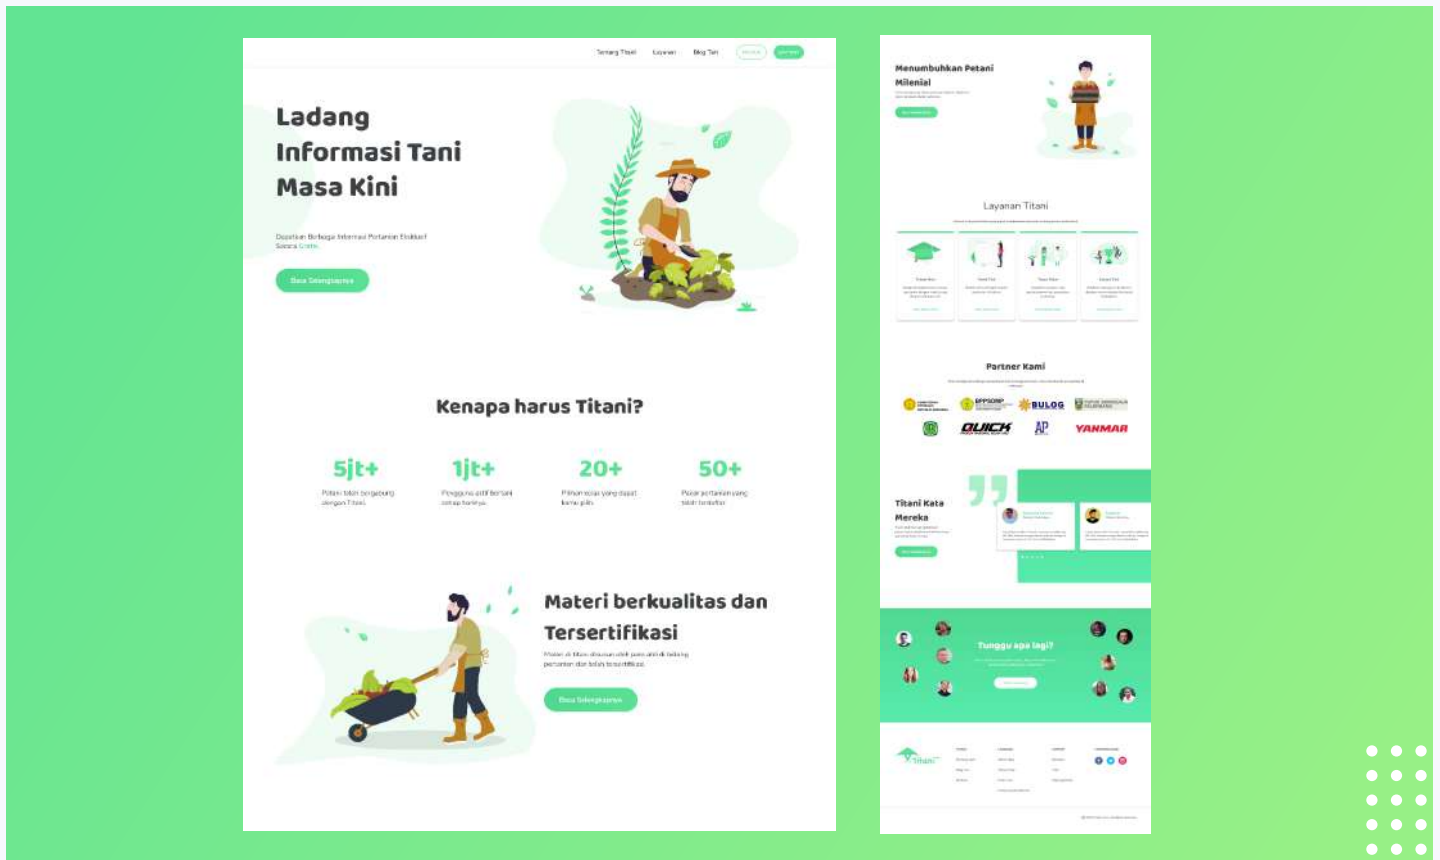

This is a concept of a personal website design that I made for me, I made it with 2 modes and this is a screenshot of the dark mode of my personal website. My goal is to create a personal website that is as personal branding, and also to have a place to share some of my portfolio and articles

My Role

In this project, I work as a full stack web developer

Titani

Titani website desing

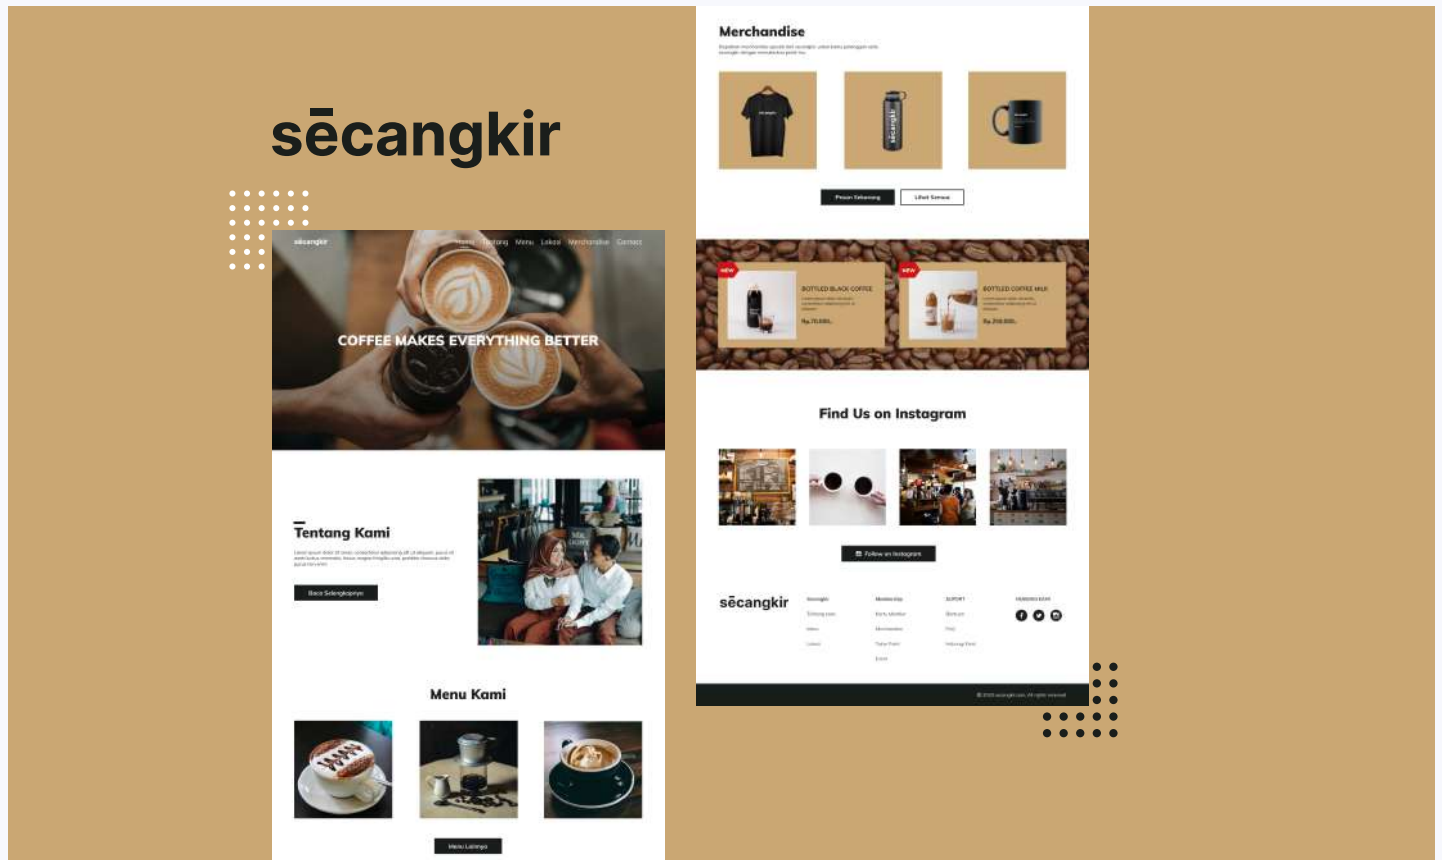

Titani is a website-based agricultural extension and education website created to facilitate farmer system in viewing various information in the agricultural sector. such as how to cultivate corps, control plant pests, view agricultural seminar information, develop agricultural technology, and make it easier for agricultural extension agents to conduct extension by online.

My Role

In this project, I work as a project manager and UI/UX Designer

Secangkir

Secangkir website desing

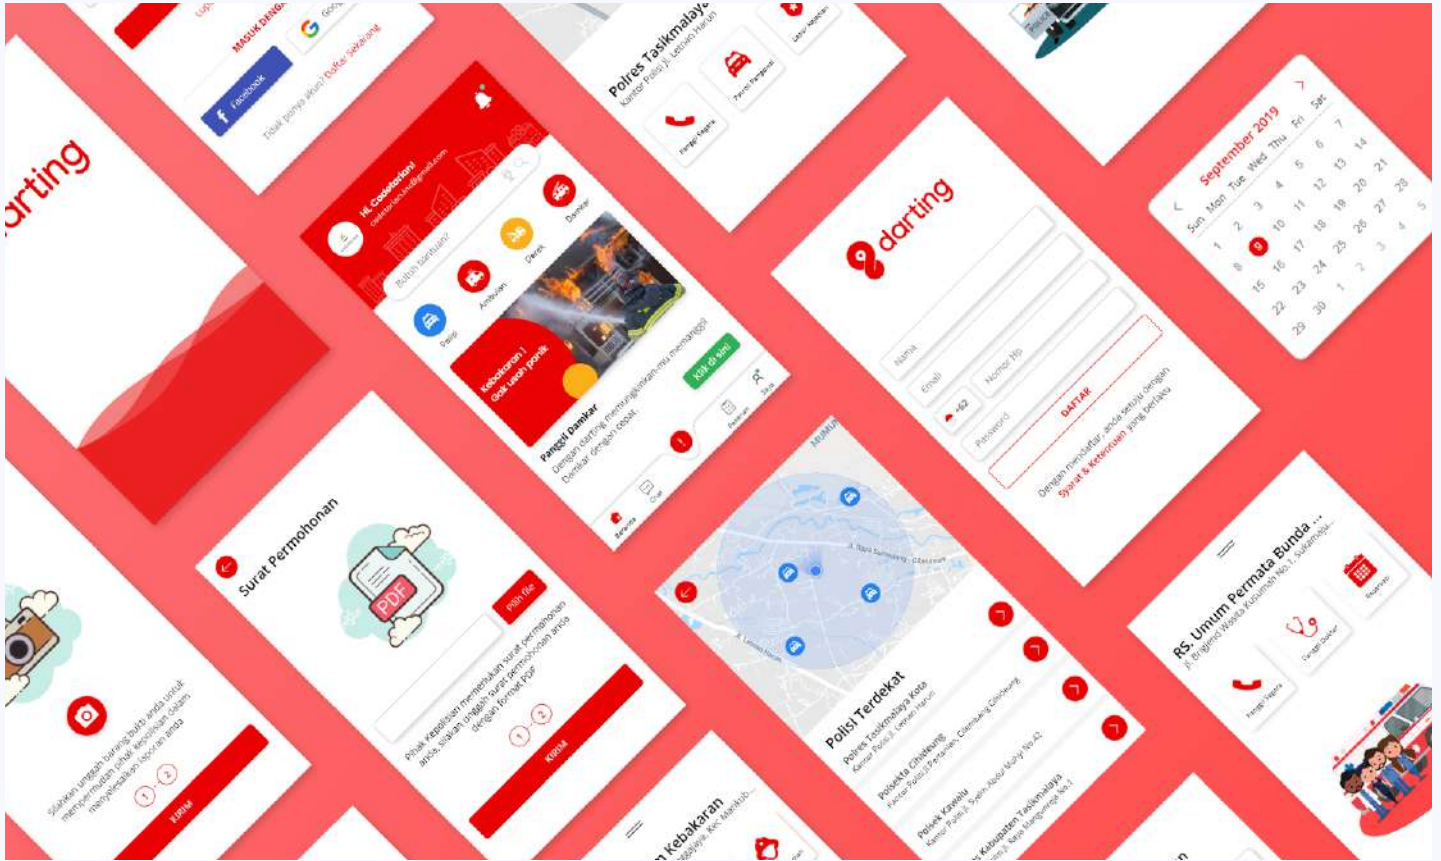

Secangkir is a rising coffee brand in Indonesia. It's modern, young, and always innovating new tastes for their loyal customers. The customer mostly is millennials, who enjoys getting a quick and tasteful coffee that they can bring anywhere.

My Role

In this project, I work as a UI/UX Designer

Darting

Design Mobile App Darting

Darting is an application for emergencies that allows users to make emergency calls to the relevant and nearest agencies such as police, hospitals, towing services, fire engines and others.

My Role
